

Few-Shot Rare Ophthalmic Disease Detection

Automated Prediction Report

Report ID	RPT-000001
Generated	2026-07-02 07:36 UTC
Clinician / User	Neha Bharule (nehabharude07@gmail.com)
Patient / Case Reference	N/A
Few-Shot Setting	5-way 5-shot

Prediction Summary

Predicted Class	Coats Disease
Confidence	20.63%

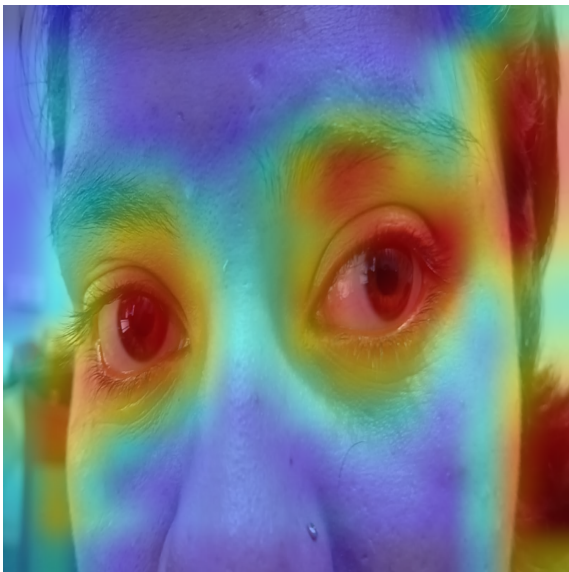

Class Probabilities (Prototypical Network softmax over distances)

Rare Disease Class	Similarity Probability
Coats Disease	20.63%
Stargardt Disease	20.14%
Best Vitelliform Dystrophy	20.07%
Choroideremia	19.59%
Retinitis Pigmentosa	19.57%

Disclaimer: This report was generated by an AI research/demonstration system using a Prototypical (few-shot) Network over a small support set. It is intended to illustrate an automated rare-disease detection pipeline and is **not** a validated diagnostic device. All findings must be reviewed and confirmed by a qualified ophthalmologist before any clinical decision is made.
